VSC COLOR-FLAKE FLOORING SYSTEM

A truly unique overlay that is attractive and designed as a life-long system.

Utilizing the specialized VSC concrete substrate restoration process, even the ugliest floor can be restored to accept a COLOR-FLAKE floor. Then our unique system utilizing proven VSC epoxy formulations is installed by a trained and qualified VSC contractor. The end result is a beautiful, easy-to-maintain floor ideal for any area and designed to look its best. And stay that way.

Our Process

OUR PROCESS starts with thorough substrate preparation. Our contractors utilize special diamond grinding equipment with 'dust' collectors.

Following preparation, all cracks, saw cuts, seams, pits and imperfections are filled and leveled. Once the substrate is properly prepared and leveled, the selected VSC COLOR-FLAKE Floor System is installed. All VSC contractors are trained to maintain a clean zone during the preparation and installation process.

Once completed, our new owners have a transformed floor. One that is beautiful, light reflective, oil and stain resistant and is unbelievably easy to maintain. All VSC products come with the VSC Quality Assurance Guarantee.

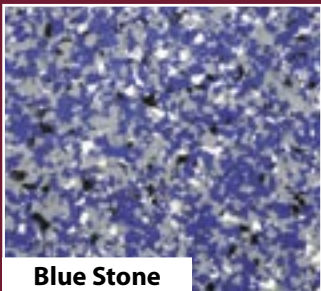

Common Blends

Country Stone

Silver Stone

Blue Stone

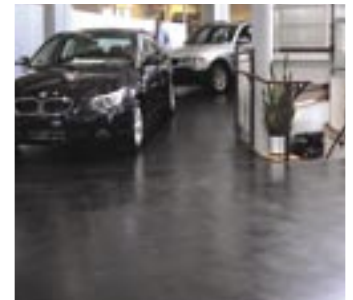

Smokey Stone

COLOR OPTIONS With VSC, customers have unlimited COLOR-FLAKE color options. There are four common blend selections available. However, an endless variety of colors can be created using many individual color choices. VSC also offers a final top-coat option of our ULTRA-GLOSS CRU urethane. This popular industrial finish coat offers the ultimate in stain, scratch and UV resistance.

So, whatever your application, the VSC COLOR-FLAKE Floor System has the options and durability to provide you with a beautiful floor designed to last a lifetime.

SOLID COLOR If your preference is a solid colored floor, then VSC has options for you. Just give us a call, let us know your interest and need. We'll have a flooring specialist help you find your solution.
